COLLOIDS AND SURFACES A

Subject Index

1-Alkyl-4-methylpyridinium salts, 135

Adsorption, 11, 19, 25, 135
Adsorption isotherms, 39
Adsorption potential distributions, 39
Adsorption properties, 247
Aggregation, 237
Air/water interface, 127
Alum, 155
α-Alumina, 175
Anionic microparticles, 25
Antimony (V) phosphate cation exchanger, 19
Argon and nitrogen adsorption, 165
Association, 247

Bridging theory, 25
Brine, 269
Bubble growth, 117

Capillaries, 295
Carboxyfluorescein, 259
Carminic acid, 61
Cationic polymers, 25
Cationic surfactants, 135
Chain anisotropy, 11
Chalk, 269
Coagulation, 155
Coil-to-globule transitions, 145
Colloids, 175
Conductimetry measurements, 237
Copolymer adsorption, 127
Crude oil emulsion, 279
Crystalline zirconias, 165

Deaeration, 67
Density profile, 51
Detachment, 107
Dextran, 191
Dielectric spectroscopy, 175
Droplet, 107
Dry heating, 191
Dubinin–Astakhov equation, 39
Dubinin–Radushkevich equation, 39
Dynamic surface tension, 117

Electric double layer, 215
Electrostatically stabilized latices, 1
Electrostatic repulsion, 215
Emulsion stability, 279
Ethyl acrylate–methacrylic acid copolymers, 1

FeO, 97
γ-FeOOH, 79
γ-FeOOH preparation, 97
Field-flow fractionation, 215
Filtration, 67
Fine particles, 67
Flocculation, 1, 25, 229
Foamability, 191
Force, 107

Gas nuclei, 67
Green Rust(II), 79, 97

Humic acid, 155
Hydrodynamic lift force, 215
Hydrophilic–hydrophobic copolymers, 247
Hydrophilic capillary, 117
Hydrophobic capillary, 117
Hydrophobic flocculation, 67

Imbibition, 269
Immiscible liquids, 51
Impact, 107
Inertial lift force, 215
Infrared dichroism, 11
Initial stage, 229
Interfacial chains, 145
Interfacial density, 51
Interfacial phenomena, 67
Interfacial tension, 51, 269
Interfacial thickness, 51

Intermediate, 97
Iron compounds, 97
Iron(II) oxidation, 79, 97

Kinetics, 19, 229

Lipid bilayers, 259
Lipid mixtures, 259
Liposome release, 259
Liquid–liquid interface, 51

Maillard complex, 191
Maximum bubble pressure method, 117
Mechanism, 79
Microporosity, 39
Microporous-mesoporous zirconias, 165
Molecular weight, 145
Multicompnent flocculant systems, 25

n-Cluster effects, 145
Non-ionic surfactants, 61

Oil displacement, 295
Oil recovery, 269
Organic contaminants, 155
Organocolloids, 279

Paraffinic deposits, 279
pH during iron(II) oxidation, 79
Phosphamidon, 19
Pillared clays, 39
Polarographic micelle points, 61
Polyacrylamides, 247
Polyelectrolyte, 229
Poly(ethylene oxide), 11, 237
Polymer–surfactant interactions, 237
Poly(*N*-isopropyl-acrylamide), 145
Polystyrene latex, 145, 229
Protein-stabilized foam, 191

Rebound, 107
Rheological properties, 1, 247

Salicylic acid, 155
Salt effect, 237
Sedimentation, 175, 215
Silica, 175
Skin, 259
Sodium aluminium silicates, 203
Sodium dodecyl sulfate, 237
Solid–liquid interface, 135
Sols, 25
Stratum corneum, 259
Stress relaxation experiments, 127
Structure of paraffinic deposits rheology, 279
Substrate, 107
Surface, 107
Surface activity, 61
Surface expansion, 117
Surface modification, 203
Surface tension, 135
Surfactant, 269
Surfactant solutions, 295
Suspensions, 175

Textural characterization, 165
Thermal ageing, 165
Thickening, 1
Titanium dioxide, 135
Transmission electron microscopy, 97
Triton X-100, 259

Viscosity, 247

Water, 107
Water–air interface, 135
Water treatment, 155
Wettability, 117
Wetting, 269

X-ray scattering, 279

Yttria-doped zirconia, 165
